

## BARCODE TAG DESCRIPTION

Barcode asset tags are used to keep track of company assets by labeling them with a barcode. Each tag provides a unique identification code to each asset. It helps provide management accurate records on location, condition, and maintenance history of each asset. Ideal for tool cribs and equipment because of its durability.

## DRAWINGS

Primark bar code asset tags can be made on both aluminum and stainless steel material. Bar code tags use code 128 symbology (unless otherwise specified).

Sizing of each tag to be 1"x3" with two 3mm (1/8") holes on either side of long dimension.

Aluminum bar code tags maintain a Teflon UV and anti-paint top coat. Stainless steel to be permanently engraved.
